

CCR pulse connect

CCR pulse connect is a wireless gateway which transmits real time data to the CCR cloud using secure encrypted IoT data protocols. This device can easily be installed on cabinets and condensing units and connect to their controllers through Modbus interface.

Advantages

- Easy installation and Plug and Play connectivity
- Real time data transmission to the CCR cloud via Cellular, Ethernet or Wi-Fi network
- Cybersecurity compliant
- Provision to add extra sensors: e.g. temperature, humidity

Scope of Supply

- Wireless gateway hardware device and installation support
- Web access to CCR Pulse view application on subscription basis
- Currently available for CCR AirCOOL (plug-in) and WaterCOOL (SPI) cabinets and condensing units

CCR pulse connect is our upcoming new product and available to order along with CCR pulse view from second quarter of 2026.
